

WesternBright[®] Sirius[®]

Most sensitive substrate for chemiluminescent Western blotting

WesternBright Sirius is the most sensitive HRP substrate available from Advansta for chemiluminescent Western blotting. With attomole sensitivity and a long-lasting signal, WesternBright Sirius allows you to detect bands not visualized with other substrates. High signal-to-noise and a large dynamic range make it ideal for quantifying low-intensity bands.

WesternBright[®] Sirius[®]

Most sensitive substrate for chemiluminescent Western blotting

WesternBright Sirius allows you to detect low-abundance proteins, with a strong, long-lasting and quantitative signal.

Chemiluminescent detection

WesternBright Sirius is the most sensitive chemiluminescent HRP substrate offered by **Advansta**, specially engineered to produce an extremely strong signal to detect low-abundance proteins and to work with very low antibody concentrations.

High sensitivity, low background

Sensitivity of chemiluminescent substrates from various suppliers. 2-fold serial dilutions of purified transferrin were electrophoresed by SDS-PAGE then transferred to a PVDF membrane. The blots were blocked then probed with a rabbit anti-transferrin primary antibody followed by an HRP-conjugated anti-rabbit secondary antibody. Various substrates were applied to the membranes then signal was measured with a CCD camera.

WesternBright[®] Sirius[®]

Most sensitive substrate for chemiluminescent Western blotting

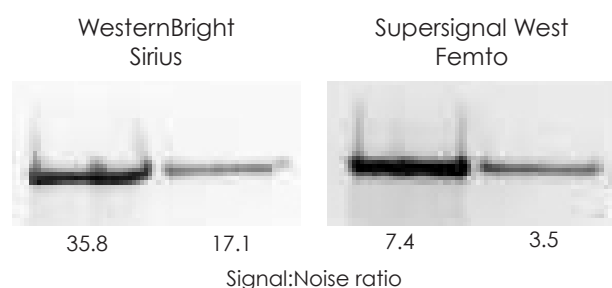

Image blots hours after substrate incubation

A slot blot containing a serial dilution of an HRP-conjugated antibody was incubated with WesternBright Sirius, and imaged at the times indicated. After 8 hours, the bands are still easily detected with only a 2 minute exposure.

Low background for better band quantification

WesternBright Sirius provides sensitive detection combined with extremely low background. Duplicate Western blots were conducted to analyze samples of plasma, diluted either 1:100 (left lanes) or 1:600 (right lanes) in PBS. The blots were probed with a goat antisera primary antibody, and an HRP-conjugated secondary antibody. After detection with either WesternBright Sirius or SuperSignal[®] West Femto (Thermo Scientific), the blots were imaged for 8.3 minutes. The signal-to-noise ratio is shown for each band.

WesternBright® Sirius®

Most sensitive substrate for chemiluminescent Western blotting

WesternBright Sirius is designed for sensitive detection and low antibody concentrations. With low background and a strong, long-lasting chemiluminescent signal, WesternBright Sirius is the best choice for quantifying low-abundance bands.

Features

- Detect low-abundance proteins
- Low background for high signal-to-noise ratio
- Long-lasting signal for flexible imaging
- Image chemiluminescence by CCD or film

Ordering Information

Catalog Number	Product		Size
K-12043-C20	WesternBright® Sirius® Western Blotting HRP Substrate Trial kit size	For 200 cm ² membrane	20 ml
K-12043-D10	WesternBright® Sirius® Western Blotting HRP Substrate	For 1000 cm ² membrane	100 ml
K-12043-C20	WesternBright® Sirius® Western Blotting HRP Substrate	For 2000 cm ² membrane	200 ml

The highest sensitivity

Slot blots containing serial dilutions of an HRP-conjugated antibody were incubated with WesternBright ECL, WesternBright Quantum® or WesternBright Sirius and detected with a 2-minute exposure to film.
